

ABSTRACT

In order to realize a weighing device capable of expediting the process of weighing to discharging by performing the steps of weighing, stocking and discharging without stopping the movement of a container, a combination weighing device including 5 the same, and a weighing method, a weighing device 10 includes a supply unit 12, a weighing unit 13, a stock unit 14, a discharge unit 15, a transfer unit 16, and a revolving mechanism 19. The supply unit 12 supplies a target object to a container C revolving in the weighing unit 13. The weighing unit 13 weighs the container C while revolving the same. The stock unit 14 stocks a plurality of containers C while holding the 10 plurality of containers C three-dimensionally and revolving them. The discharge unit 15 discharges the target object from the container C while revolving the container C.
